Key dates and deadlines

Deadline for submission of abstracts:

January 15, 2012

Notification of acceptance to authors:

February 2012

Workshop:

24-26 April 2012

Workshop on European Population Doses from Medical Exposure
24-26 April 2012
Athens, Greece

Organized by
the Greek Atomic Energy Commission

funded by
the European Commission

The Dose Datamed 2 project

The objectives of the Dose Datamed 2 project (DDM2) is to collect available data on the patient doses from the radiodiagnostic procedures (X-ray and nuclear medicine) in the European Union and to facilitate the further implementation of *Radiation Protection 154. European Guidance on Estimating Population Doses from Medical X-ray Procedure*, published by the European Commission in 2008.

To achieve the above objectives, the study aims at:

- providing advice and collecting feedback from the application of the guidance RP 154;
- providing estimates of population doses in EU Member States and the population dose in European Union as a whole;
- providing a database for population dose information which will enable continuous collection and follow-up of European population doses.

Further information for the Dose Datamed 2 project is available on the web site : <http://ddmed.eu>

Welcome to Dose Datamed 2 Workshop

We are very pleased to invite you to the Workshop on European Population Doses from Medical Exposure. The workshop aims at informing on the results of the DDM2 project and achieving wide feedback on the European Guidance and follow-up schemes, before their submission to the European Commission.

Furthermore, through the information dissemination regarding the DDM2 project all countries will hopefully be encouraged to establish and maintain continuous population dose estimation in accordance with EC directive requirements.

The workshop will be a great opportunity to discuss and exchange information on population doses from medical procedures.

Thematically, it will focus on:

- the presentation of data collection results
- the presentation of population dose estimations
- the evaluation of the test implementation of the European Guidance (RP 154) - proposals for modifications or amendments
- the presentation of the population dose information database.

Registration and abstracts submission

The workshop programme consists of oral and poster sessions of contributed papers. Keynote presentations will be given by experts in the project.

Participation to the Workshop is open to experts from the EU Member States, representing radiological practitioners, competent authorities, national organizations responsible for collecting health care statistical information and other possible stakeholders.

Participants will not be charged with registration fee.

Details about the registration process, the abstracts submission and the social programme will be announced soon at workshop website.

Working language

The working language of the workshop will be English.
